Cybersecurity Awareness for End-Users

A 4-Days Workshop

Training Overview

This is a 4-day cybersecurity training workshop dedicated to non-technical professionals or end-users handling sensitive data at various organizations' departments. Traditional online training is often a case of "click next, next, finish". However, our training course will be interactive and allow self-directed research. It will also encourage the creative application of resources so that users can learn by doing.

As an outcome, cybersecurity for non-technical professionals will give participants an essential knowledge of cybersecurity and how it affects their organizations, whether small or large. The course will outline the current cybersecurity landscape, including impacts to individuals, governments, and organizations. You will gain essential foundational knowledge of cybersecurity, business consequences, and the threat landscape for your organization.
